Curious, practical, honest, simple, learner-focused, no buzzwords

About Me

About Me

Hi, I'm Sarthak Sonawane, an Information Technology engineering student interested in Artificial Intelligence, Machine Learning, and Data Analytics. I enjoy solving practical problems using data and building projects that have real-world applications.

During this internship, I worked on understanding how machine learning supports business decisions instead of only focusing on building models. I enjoy exploring datasets, finding patterns, and explaining my work in a clear and simple way.

Case Study 1 – Search & Discoverability ML Framing

Search & Discoverability ML Task

The Problem

Search systems need to decide which webpages should appear first when users search for information. Simple rules such as sorting only by impressions or clicks often miss important patterns, leading to lower user engagement.

What I Did

I framed this as a machine learning ranking problem. I explored the FlyRank starter dataset to understand what each row represented and identified Click Through Rate (CTR) as the target proxy. I explained why ranking is more suitable than using fixed rules and connected the model's predictions to a real business action: improving the order of search results so users can find relevant content more easily.

Instead of jumping directly into model building, I focused on defining the problem, choosing an appropriate success metric, and understanding the data.

Outcome

This exercise helped me understand that successful machine learning projects begin with clear problem framing. I learned how business goals, data, evaluation metrics, and user actions connect before any model is trained.

Bio

Short Bio

I'm Sarthak Sonawane, an IT engineering student passionate about AI, Machine Learning, and Data Analytics. I enjoy learning by building projects, exploring datasets, and solving practical problems using technology.

Contact / Call To Action

Contact

I'm always interested in learning from experienced professionals and collaborating on AI, machine learning, and software development projects.

Feel free to connect with me on LinkedIn or GitHub to see my work and follow my learning journey.

Before & After Example

Generic AI Version

"I am a results-driven developer passionate about leveraging cutting-edge AI technologies to deliver innovative and impactful solutions."

My Edited Version

"I enjoy solving practical problems with data and AI. I focus on understanding the problem first, then building solutions that are simple, useful, and easy to explain."
